Advancing the Slide

General · https://mymedicalimages.com/help/advancing-the-slide/

Advancing the Slide

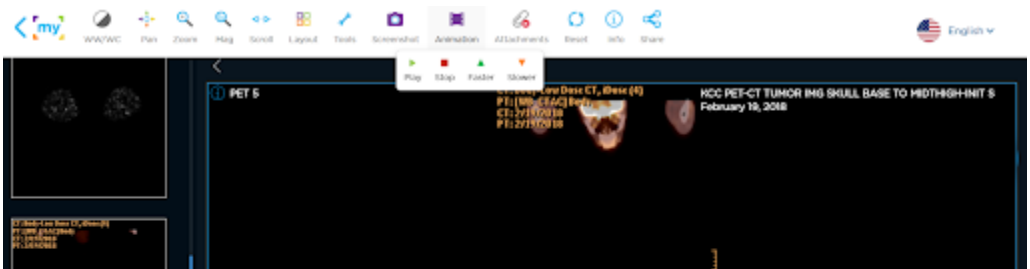

To advance the slide of the image that is currently loaded in the viewer, simply mouse over the image and move the scroll wheel up or down, or use the arrow keys to advance the slide forward or backward.

Alternatively, you can click and drag the white progression bar at the bottom of the image in the desired direction.

Playing the Animation

To play the animation for the currently loaded image, click on the "Animation" tool in the toolbar at the top of the viewer, and select the "Play" button. You can adjust the speed the animation plays at by clicking on the "Faster" or "Slower" button, and you can stop the animation by clicking on the "Stop" button.

Advancing Images In a Layout

If you are using the layout tool to look at multiple images, you can advance the images separately by selecting one image as a focus. Simply click on the image you would like to focus, and you will be able to use the advancement tools to advance the image sets individually from one another.
